

# Global Surrogacy and International Parents

**Cristin C. Slater, MD**  
Medical Director & REI  
Specialist  
Idaho Center for  
Reproductive Medicine  
Boise, ID

Global surrogacy, the practice where individuals or couples from one country seek surrogacy arrangements in another, is increasing. This often occurs in countries with more favorable legal frameworks, lower costs, or access to higher medical care and a broader pool of gestational carriers. There are various reasons why global surrogacy occurs and there are challenges and ethical concerns for global surrogacy. International patients have

considerations when choosing various destinations for global surrogacy. Current popular destinations for global surrogacy include the United States, Ukraine, Georgia, Greece, Mexico, and Columbia.

Global surrogacy can offer solutions for those unable to pursue surrogacy in their home countries but it requires careful consideration of legal, ethical, and personal factors. Prospective parents should engage with reputable agencies and legal experts to navigate the complexities involved. In so doing, global surrogacy can be done safely, according to guidelines that are followed, and with expert care provided.
